Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Begleiter EP 0 217 821 B1, in view of Begleiter II (Edible Holography).

Begleiter teaches an edible holographic element comprising a polymer such as hydroxypropyl methylcellulose (column 2, lines 13-30). The edible holographic further comprises plasticizer such as polyhydric alcohol and dextrose (column 2, lines 49 through column 3, lines 1-33).

Begleiter does not teach the pharmaceutical dosage form comprising active substance. However, Begleiter II teaches a holographic composition for compressed candies, children's vitamins, and form of brand identification (page 104). Begleiter II further teaches a holographic composition comprising cellulose such as HPMC (page 103). Thus, it would have been obvious to one of ordinary skill in the art to modify the teachings of Begleiter in view of the teachings of Begleiter II to obtain the claimed invention, because Begleiter teaches an edible holographic composition suitable for candies and other food products, and because Begleiter II teaches holographic can be applied to food products such as candies, children's vitamins, and other form of brand ID.

Pertinent Arts

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Sullivan et al., and McGrew et al. are cited as of interest for the teachings of holographic and brands printing.
